

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Previously Presented) A product management system comprising:  
a first resonance circuit;  
a second resonance circuit; and  
a reader/writer for at least one of reading information stored in a semiconductor device and writing information in the semiconductor device,  
wherein the first resonance circuit comprises a first antenna coil and a first capacitor,  
wherein the second resonance circuit comprises a second antenna coil and a second capacitor,  
wherein a first packing material for packing a product is provided with the first resonance circuit,  
wherein a second packing material for packing the first packing material is provided with the second resonance circuit,  
wherein the product is provided with the semiconductor device,  
wherein the second resonance circuit can communicate with the reader/writer and the first resonance circuit, and  
wherein the first resonance circuit can communicate with the second resonance circuit and the semiconductor device.
2. (Previously Presented) The product management system according to Claim 1, wherein a communication method between the reader/writer and the first resonance circuit, a communication method between the first resonance circuit and the second

resonance circuit, and a communication method between the second resonance circuit and the semiconductor device are identical to each other.

3. (Original) The product management system according to Claim 2, wherein the communication method is an electromagnetic induction method.

4. (Previously Presented) The product management system according to Claim 1, wherein a communication method between the reader/writer and the second resonance circuit is different from a communication method between the first resonance circuit and the semiconductor device.

5. (Previously Presented) The product management system according to Claim 4, wherein the communication method between the reader/writer and the second resonance circuit is any one of an electromagnetic induction method and a microwave method.

6. (Previously Presented) A product management system comprising:  
a first resonance circuit;  
a second resonance circuit; and  
a reader/writer for at least one of reading information stored in a semiconductor device and writing information in the semiconductor device,  
wherein the first resonance circuit comprises a first antenna coil and a first capacitor,  
wherein the second resonance circuit comprises a second antenna coil and a second capacitor,  
wherein a first packing material for packing a product is provided with the first resonance circuit,

wherein a second packing material for packing the first packing material is provided with the second resonance circuit,

wherein the product is provided with the semiconductor device,

wherein the second resonance circuit can communicate with the reader/writer and the first resonance circuit,

wherein the first resonance circuit can communicate with the second resonance circuit and the semiconductor device; and

wherein a communication range between the reader/writer and the second resonance circuit is longer than a communication range between the first resonance circuit and the semiconductor device.

7. (Previously Presented) The product management system according to Claim 6, wherein a communication method between the reader/writer and the second resonance circuit is any one of an electromagnetic induction method and a microwave method.

8. (Previously Presented) The product management system according to Claim 1 or 6, wherein the semiconductor device is selected from the group of an ID tag, an ID chip, an ID label, an ID seal and an ID sticker.

9. (Currently Amended) A method comprising:

sending ~~at least one of~~ a first signal comprising first information<sub>1</sub> and a first electric power from a reader/writer to a resonance circuit, wherein the resonance circuit comprises an antenna coil and a capacitor;

sending ~~at least one of~~ a second signal comprising the first information<sub>1</sub> and a second electric power from the resonance circuit to a semiconductor device in response to a receipt of ~~said at least one of~~ the first signal and the first electric power, wherein said semiconductor device comprises a thin film transistor, and an antenna;

sending a third signal comprising second information from said semiconductor device to the resonance circuit in response to a receipt of ~~said at least one of the~~ second signal and the second electric power by the semiconductor device,

sending a fourth signal comprising said second information from the resonance circuit to the reader/writer,

wherein the semiconductor device is attached to a product, the product is contained in a packing material, the resonance circuit is attached to the packing material and the reader/writer is disposed outside of the packing material.

10. (Currently Amended) A method comprising:

sending ~~at least one of~~ a first signal comprising first information<sub>1</sub> and a first electric power from a reader/writer to a first resonance circuit, wherein the first resonance circuit comprises a first antenna coil and a first capacitor;

sending ~~at least one of~~ a second signal comprising the first information<sub>1</sub> and a second electric power from the first resonance circuit to a second resonance circuit in response to a receipt of ~~said at least one of~~ the first signal and the first electric power, wherein the second resonance circuit comprises a second antenna coil and a second capacitor;

sending ~~at least one of~~ a third signal comprising the first information<sub>1</sub> and a third electric power from the second resonance circuit to a semiconductor device in response to a receipt of ~~said at least one of~~ the second signal and the second electric power, wherein said semiconductor device comprises a thin film transistor, and an antenna;

sending a fourth signal comprising second information from said semiconductor device to the second resonance circuit in response to a receipt of ~~said at least one of~~ the third signal and the third electric power by the semiconductor device,

sending a fifth signal comprising said second information from the second resonance circuit to the first resonance circuit,

sending a sixth signal comprising said second information from the first resonance circuit to the reader/writer,

wherein the semiconductor device is attached to a product, the product is contained in a second packing material, the second resonance circuit is attached to the second packing material, the second packing material is contained in a first packing material, the first resonance circuit is attached to the first packing material, and the reader/writer is disposed outside of the first packing material.

11. (Previously Presented) The method according to Claim 9 or 10, wherein the semiconductor device is selected from the group of an ID tag, an ID chip, an ID label, an ID seal and an ID sticker.

12. (Previously Presented) The method according to Claim 10, wherein the first packing material is selected from the group of a suitcase, a corrugated fiberboard, a container and a transporting vehicle.

13. (Previously Presented) A product management system comprising:  
a semiconductor device;  
a resonance circuit; and  
a reader/writer for at least one of reading information stored in the semiconductor device and writing information in the semiconductor device,  
wherein the resonance circuit comprises an antenna coil and a capacitor,  
wherein a packing material for packing a product is provided with the resonance circuit,  
wherein the product is provided with the semiconductor device,  
wherein the semiconductor device comprises a thin film transistor, and an antenna, and

wherein the resonance circuit can communicate with the reader/writer and the semiconductor device.

14. (Previously Presented) The product management system according to Claim 13, wherein a communication method between the reader/writer and the resonance circuit is identical to a communication method between the resonance circuit and the semiconductor device.

15. (Previously Presented) The product management system according to Claim 14, wherein the communication method is an electromagnetic induction method.

16. (Previously Presented) The product management system according to Claim 13, wherein a communication method between the reader/writer and the resonance circuit is different from a communication method between the resonance circuit and the semiconductor device.

17. (Previously Presented) The product management system according to Claim 16, wherein the communication method between the reader/writer and the resonance circuit is any one of an electromagnetic induction method and a microwave method.

18. (Previously Presented) The method according to claim 9, wherein the resonance circuit further comprises any one of a battery, a CPU and a memory.

19. (Previously Presented) The product management system according to claim 13, wherein the resonance circuit further comprises any one of a battery, a CPU and a memory.

20. (Previously Presented) The product management system according to claim 1, wherein the second packing material is a transport vehicle.

21. (Previously Presented) The product management system according to claim 6, wherein the second packing material is a transport vehicle.

22. (Previously Presented) The method according to claim 10, wherein the first packing material is a transport vehicle.

23. (Previously Presented) The product management system according to claim 1,  
wherein the first resonance circuit consists of the first antenna coil and the first capacitor, and  
wherein the second resonance circuit consists of the second antenna coil and the second capacitor.

24. (Previously Presented) The product management system according to claim 6,  
wherein the first resonance circuit consists of the first antenna coil and the first capacitor, and  
wherein the second resonance circuit consists of the second antenna coil and the second capacitor.

25. (Previously Presented) The method according to claim 9,  
wherein the resonance circuit consists of the antenna coil and the capacitor.

26. (Previously Presented) The method according to claim 10,

wherein the first resonance circuit consists of the first antenna coil and the first capacitor, and

wherein the second resonance circuit consists of the second antenna coil and the second capacitor.

27. (Previously Presented) The product management system according to claim 13,

wherein the resonance circuit consists of the antenna coil and the capacitor.
